Startup Pitches (5 minutes including Q&A)

Green Logistics & Automation

WAVES (Luxbg.) Sustainability Management Platform identifies the carbon footprints of shipments, products, and companies from any sector.

This solution provides real data and transparent analyses for a more sustainable economy. www.waves.lu

Urban Energy (Germany) uses artificial intelligence (AI) and machine learning to control decentralized energy generation/consumption in real-time.

Big data enables efficient and resource saving energy distribution for smart cities: practical, economical, CO2 neutral. www.urbanenergy.de

Success story

Urbantz (Be-Lux.) logistics solutions assists its clients with the delivery of services and parcels throughout the first and last-mile process.

The technology offers a **full stack of features** from fleet management. to driver solutions and customer experience. www.urbantz.com

Logistics Platform

Evertracker (Germany) with CEO and charismatic co-founder Marc Schmitt provides a Neutral, Smart Control Tower for Global Supply Chains enabling manufacturers/producers to get end-to-end visibility, and predictability of their global supply chains. It provides transparency at item level, enabling users to know where their shipments are, what parts are delayed or have issues, for reliable production planning. www.evertracker.io

Artificial Intelligence & Automation

Clear Image (Luxembourg) Automated image processes – provides combination of person/object recognition, posture recognition& distance estimates through stereo sensors for scene analysis allowing automated warnings, for threatened property/ processes. The technology offers solutions in retail, e-commerce and transportation for inventory or product security. www.clearimageai.com

Clockwork: Digitizing the Delivery, by providing enterprise software connecting global shippers to their existing delivery network to control your brand, your cargo and network avoiding manual processes. www.clockworkdelivery.com
